

Overview

Aurora Energy is a utility company headquartered in Oslo, Norway. In 2025 the company reported revenue of 2.4 billion EUR. Aurora supplies electricity and heating to residential and business customers in the Nordic region.

Renewable Generation

Aurora's installed capacity consists of 850 MW of wind, 320 MW of solar, and 1,100 MW of hydro power. Hydropower remains the backbone of the portfolio, delivering roughly half of the annual output.

Customers

Aurora serves 1.9 million households. About 62 percent of customers renew their subscriptions each year. Average monthly churn is under five percent. The customer app is used by more than 700,000 people.

Grid Investment

Aurora is investing 310 million EUR in smart meters. The rollout covers 40 percent of the service territory by 2027. Smart metering improves outage detection and enables time-of-use pricing for households.

Emissions

Aurora reduced emissions by 18 percent compared with 2020 levels. The company targets a 55 percent reduction by 2030. Renewable power purchases apply to all business electricity products.

Workforce

Aurora employs 1,750 people. Women make up 31 percent of engineering roles. The company awards 60 scholarships per year in energy technology. All employees receive five paid volunteering days annually.
